

Module 01 Lesson 06

Video: Watch How to Create and Share a VoiceThread Transcript

Narrator: Creating your own VoiceThread is easy. To get started, make sure you're logged into VoiceThread. Select the 'Create' tab. From this page, you start the creation process by selecting 'Upload'. As you can see, there are multiple options from which you can pull media: from your own computer, media sources-from which you can take media from the sources listed here, even from your own Facebook account-, and a URL if you have one.

For this demo, we'll take an image from 'My Computer'. Find it, and select it. After the media uploads, you can make a comment on it. To do this, select 'Comment' from the menu, and when the slide appears, click the 'Comment' button for that slide, and choose which way you would like to make a comment. Either by phone, webcam, microphone, type it, or even upload media. For this demo, we'll just type in a comment. When you finish the comment, you save it, and now the comment appears in the VoiceThread.

To share your VoiceThread with someone, the easiest way to do this is by sharing the link. Do this by going to the 'Share' menu. The share options appear. For this demo, we will just use the 'Get a Link' option, because it is the easiest and most commonly used. When you click 'Get a Link', this dialogue box appears. Click this button to copy the URL to your computer's clipboard. You can then paste it into an email, and send it to the person you wish to view your VoiceThread.

To learn more about your sharing options, go to VoiceThread's tutorial on sharing by clicking here. (<http://voicethread.com/?#u1022143.b325897.i1731223>)
